x) The sum calculation is done without taking into account single values below limit of detection or limit of quantification.
Explanation: The symbol "<" or n.d. in the result column means, the substance concerned is not quantifiable at the limit of quantification shown opposite.
Parameter-specific measurement uncertainties and information regarding the method of calculation will be provided upon request if the reported results are above the parameter-specific limit of quantification.

Remarks

Remark pesticides:

In the present sample, the sum of benomyl and carbendazim expressed as carbendazim were detected with a concentration of 0.61 mg/kg.

Two processing factors have to be considered: processing factor for drying is 7 and processing factor for extracting is 10 according to customer's information.

Extraction and processing factors may vary depending on product, pesticide and extractant.

Consequently it is unknown whether pesticides are concentrated or diluted during extraction.

Provided that all substances are concentrated in the extract and taking into account both above mentioned factors, the sample meets the provisions of Regulation (EC) No 396/2005 for cultivated fungi in the actually valid version. (maximum residue level for sum of benomyl and carbendazim expressed as carbendazim: 1.0 mg/kg)

Under this condition and in our opinion the above-named product is marketable in Germany.

A final assessment is only possible after examination of the raw material.

Start of testing: 23.09.2020

End of testing: 28.09.2020

The results are related only to the samples tested. In cases where the laboratory has not been responsible for sampling, the reported results apply to the samples as received. Duplication of this document or of parts of it requires the authorization from laboratory. In accordance our agreement in writing in the order confirmation, the results in this test report are in a simplified form in the context of DIN EN ISO/IEC 17025:2018, paragraph 7.8.1.3.
